## Abstracts

According to our (Global Info Research) latest study, the global Medical Composite Membrane market size was valued at USD million in 2023 and is forecast to a readjusted size of USD million by 2030 with a CAGR of % during review period.

Medical composite membranes are majorly used for separation of the feed stream. The feed stream is passed through the membrane, which allows selective constituents to pass through, depending on its pore size, whereas others are stopped back on the surface of the membrane. The elements that pass through are known as permeate and the ones that are retained back are known as concentrate. Different types of membranes are used in the medical industry depending on the size of their pores.

Europe is the leading market for medical composite membranes. The growth of the medical composite membranes market in Europe is driven by the increasing aging population (above 65 years), growing End-Stage Renal Disease (ESRD) patient pool, increasing availability of improved diagnosis facilities, and rising incidences of chronic diseases, such as diabetes and hypertension.

The Global Info Research report includes an overview of the development of the Medical Composite Membrane industry chain, the market status of Pharmaceutical Filtration (PSU & PESU, PVDF), Hemodialysis (PSU & PESU, PVDF), and key enterprises in developed and developing market, and analysed the cutting-edge technology, patent, hot applications and market trends of Medical Composite Membrane.
