Abstracts

The global Medical Contrast Catheter market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

The medical imaging catheter is the key equipment for percutaneous angiography. It should have appropriate hardness, elasticity, flexibility and torque; it should have good X-ray transparency; the shape memory should be good; Performance should be kept to a minimum. The contrast catheter is a long plastic tube, and its main function is to provide a guide so that the contrast agent can be smoothly introduced into the blood vessel to produce a contrast effect. Therefore, a contrast catheter should meet the following basic conditions: the inner tube is smooth and can generate high flow rate; the imaging performance is high; the non-traumatic tip must have a very high original shape retention performance and is not easy to deform; the guide wire can be easily passed through, etc.

This report studies the global Medical Contrast Catheter production, demand, key manufacturers, and key regions.
