According to our (Global Info Research) latest study, the global Medical Disposable Non-Inactivated Virus Sampling Tubes market size was valued at US\$ 7.88 million in 2025 and is forecast to a readjusted size of US\$ 12.66 million by 2032 with a CAGR of 7.1% during review period.

In 2025, global sales of Medical Disposable Non-Inactivated Virus Sampling Tubes reached approximately 5.3 million units, with an average market price of about USD 1.3 per unit, an annual production capacity of roughly 7.5 million units, and an industry-average gross margin of approximately 26%.

A Medical Disposable Non-Inactivated Virus Sampling Tube is a laboratory consumable designed for collecting, transporting, and temporarily preserving live virus specimens (e.g., respiratory, enteric, or bloodborne viruses). These tubes typically consist of a transparent or semi-transparent plastic body, a secure cap, and a preservation medium that maintains viral integrity and infectivity for downstream molecular testing, viral isolation, culture, or research purposes. Key design considerations include leak-proof sealing, operator safety, transport convenience, and clear labeling. They are widely used in clinical diagnostics, public health surveillance, research laboratories, and emergency outbreak testing scenarios.

Upstream components include medical-grade plastics (PP, PS), caps and sealing gaskets, viral preservation medium ingredients (buffers, protein stabilizers, preservatives), and labeling/printing materials. Some manufacturers also require sterilization equipment or external sterilization services (gamma irradiation or ethylene oxide). Production is generally OEM-based, integrating tubes, caps, preservation

medium, and labeling into a finished product. End users include hospitals, public health laboratories, third-party testing facilities, and research units. Non-inactivated virus sampling tubes are single-use consumables, discarded after sampling, transport, or testing. Consumption scales with sample volume; large public health labs or outbreak monitoring centers may use thousands to tens of thousands per day. Many laboratories pair these tubes with transport boxes, ice packs, and labeling systems to ensure sample safety and traceability.
