In 2025, global Medical Endoscope Image Sensor production reached approximately 23.33 million units, with an average global market price of around USD 18 per unit.

The gross profit margin of major companies in the industry is between 35%-50%.

In 2025, the global production capacity of Medical Endoscope Image Sensor was approximately 31 million units.

Medical Endoscope Image Sensor is a miniature imaging component specifically designed for medical endoscopic systems to capture high-resolution images inside the human body. The sensor converts optical signals into digital electrical signals and provides critical imaging data for diagnosis, minimally invasive surgery, and medical examination procedures. The product typically includes CMOS image sensors, sensor packaging structures, and related optical interfaces, requiring high sensitivity, low noise, compact size, and sterilization compatibility. It is mainly used in flexible endoscopes, rigid endoscopes, surgical imaging systems, and disposable endoscopic devices. The product boundary includes medical-grade image sensor components, excluding complete endoscope systems and imaging processors.

The medical endoscope image sensor industry chain includes upstream suppliers of semiconductor wafers, sensor materials, optical components, packaging materials, and

electronic components; the midstream sector covers sensor design, semiconductor fabrication, packaging, testing, and medical qualification; the downstream sector includes endoscope manufacturers, surgical equipment providers, hospitals, and medical diagnostic institutions. Market growth is driven by increasing minimally invasive procedures, demand for high-definition medical imaging, and expansion of disposable endoscope applications.
