## Abstracts

According to our (Global Info Research) latest study, the global Medical Equipment Monitoring Software market size was valued at US\$ 3344 million in 2025 and is forecast to a readjusted size of US\$ 6905 million by 2032 with a CAGR of 10.9% during review period.

Medical Equipment Operations and Maintenance Monitoring Software refers to CMMS, EAM, clinical asset management, remote diagnostics, IoMT visibility, RTLS asset tracking and predictive maintenance platforms used by biomedical engineering teams, clinical engineering departments, hospitals, health systems, medical device OEMs, HTM service providers, imaging centers and diagnostic laboratories. These platforms monitor equipment location, status, utilization, uptime, fault codes, work orders, preventive maintenance, calibration, service contracts, spare parts, recall information, cybersecurity exposure and lifecycle cost to improve equipment availability and reduce operational disruption.

Based on our research, medical equipment operations and maintenance monitoring software should be understood as a combined market of clinical engineering CMMS, OEM remote service platforms, medical asset tracking, IoMT visibility and predictive maintenance software. It is not a general hospital information system, an EMR, or a patient monitoring system. The core value of the software is to help hospitals, OEMs and HTM service providers improve equipment uptime, reduce unplanned downtime, manage work orders, ensure preventive maintenance compliance, track mobile assets and make better capital planning decisions. From a supply-side perspective, the market is formed by several vendor groups. Medical device OEMs such as GE HealthCare, Siemens Healthineers, Philips, Mindray, United Imaging and Neusoft Medical provide

remote diagnostics, device fleet management, predictive service and OEM-specific maintenance insights based on original equipment data. Healthcare CMMS and HTM software vendors such as Accruent, Nuvolo, TMA Systems/EQ2 and MediMizer focus on asset registries, work orders, preventive maintenance, calibration, compliance and biomedical engineering workflows. Clinical asset intelligence and service platforms such as TRIMEDX, PartsSource and HANDLE Global focus on uptime, service contracts, spare parts, lifecycle cost and capital equipment planning. RTLS and IoMT visibility vendors such as CenTrak, HID, Asimily, Claroty, Armis, Ordrr and Forescout add value through real-time location, device discovery, utilization visibility, cybersecurity risk monitoring and connected-device governance. From the demand side, hospital biomedical engineering and clinical engineering teams are the primary users, but purchase decisions increasingly involve finance, IT security, nursing, imaging departments, laboratories and health-system operations teams. Large health systems need cross-site asset visibility, utilization benchmarking, duplicate-purchase control and capital replacement planning. Imaging centers require higher uptime for CT, MRI, DR, PET/CT and ultrasound equipment. Clinical departments need mobile devices such as infusion pumps, monitors, ventilators and wheelchairs to be findable, available, clean and compliant. IT security teams need visibility into all connected medical devices, their communication behavior, vulnerabilities and network risk exposure. From a technology roadmap perspective, the market is moving from form-based CMMS toward data-driven clinical asset intelligence platforms. Traditional systems mainly answered ?what equipment do we own, where is it, and who repaired it.? Newer platforms integrate equipment logs, remote diagnostics, RTLS location data, network telemetry, OEM service data, spare-parts supply chains and AI risk models to generate health scores, predictive maintenance alerts, automated work orders, utilization insights and replacement recommendations. Future competition will depend less on basic work-order functionality and more on the ability to combine medical device data, clinical engineering workflows, OEM service ecosystems, IoMT security and hospital financial metrics into a unified operational view. Vendors with healthcare-specific workflows, integration capability, device-data access and recurring data-service models are likely to be better positioned than generic asset software providers or repair-only service companies.
