The global Medical Equipment Rental Software market size is expected to reach \$ 471 million by 2032, rising at a market growth of 5.8% CAGR during the forecast period (2026-2032).

Medical Equipment Rental Software is a specialized system designed for medical device rental providers, DME/HME suppliers, home healthcare agencies, rehabilitation equipment stores, hospital equipment departments, and medical equipment service providers, enabling them to manage the entire lifecycle of medical equipment. Its core functionalities typically include: equipment inventory management, rental order management, contract management, recurring billing, insurance and Medicare claims processing, customer and patient information management, delivery scheduling, maintenance and repair, cleaning and disinfection records, compliance documentation, equipment tracking, reporting and analytics, and mobile-enabled field services.

Medical equipment rental involves the coordinated collaboration of multiple environments—including warehouses, retail stores, patients' homes, hospitals, and maintenance centers. Cloud-based platforms and mobile applications facilitate a range of functions, such as remote order placement, driver-led delivery, on-site installation, inventory scanning, equipment status updates, and on-site delivery sign-offs. InTempo medical equipment rental software emphasizes capabilities for managing quotes, reservations, invoices, and scheduling; similarly, NikoHealth highlights its cloud-based software, noting that it can be accessed from any device and from any location.

DME/HME rentals frequently entail monthly rental fees, renewals, security deposits, buy-out options, insurance payments, Medicare/Medicaid reimbursements, split billing, and overdue account management. Consequently, the requisite software must support

automated recurring billing, payment processing, electronic claims submission, accounts receivable management, and revenue cycle management. Brightree officially emphasizes that its DME software assists in managing DME billing, optimizing reimbursement processes, and enhancing collection efficiency.
