Abstracts

According to our (Global Info Research) latest study, the global Medical Fluid Warming System market size was valued at USD million in 2022 and is forecast to a readjusted size of USD million by 2029 with a CAGR of % during review period. The influence of COVID-19 and the Russia-Ukraine War were considered while estimating market sizes.

The fluid warming system warms blood or fluids before infusions are given to patients. It is used when large infusions of cold fluids are required. This is very necessary when a patient has suffered severe trauma and requires massive blood transfusions. But once a patient's body begins to cool, a blood warmer won't provide significant benefit; it's designed to prevent heat loss, not reverse it.
