The global Medical Glove Packaging Machine market size is expected to reach \$ 235 million by 2032, rising at a market growth of 7.6% CAGR during the forecast period (2026-2032).

Medical Glove Packaging Machine refers to a specialized packaging machine or integrated packaging line used for medical gloves, including surgical gloves, examination gloves, nitrile gloves, latex gloves and other disposable medical gloves. It is designed to complete key packaging steps such as glove feeding, folding, counting, stacking, pouch forming, sealing, inner wallet packing, inner box packing, cartoning and end-of-line case packing. For sterile surgical gloves, the equipment must support stable sealing, low-contamination handling and packaging formats suitable for subsequent sterilization or sterile barrier protection. Therefore, it is different from ordinary consumer glove packaging equipment and is more closely linked to medical packaging validation, cleanliness, sealing integrity and automated quality control.

In 2025, global sales of Medical Glove Packaging Machine reached approximately 1,125 units, with an average global market price of around US\$ 122 K/unit. Production capacity varies significantly among manufacturers, with gross profit margins ranging from approximately 25% to 50%.

This report studies the global Medical Glove Packaging Machine production, demand, key manufacturers, and key regions.
