According to our (Global Info Research) latest study, the global Medical Grade Helium market size was valued at US\$ 43.2 million in 2024 and is forecast to a readjusted size of USD 66 million by 2031 with a CAGR of 4.6% during review period.

In this report, we will assess the current U.S. tariff framework alongside international policy adaptations, analyzing their effects on competitive market structures, regional economic dynamics, and supply chain resilience.

Medical Grade Helium is a rare inert gas with low density, high chemical stability and low boiling point. It plays a key role in the medical field. The liquid helium formed by repeated cooling can reach a low temperature close to absolute zero (about -273.15°), making it an ideal freezing medium for superconducting magnets in magnetic resonance imaging (MRI) equipment. It ensures efficient and stable operation of the equipment by maintaining an ultra-low temperature environment of 4.2K. At the same time, its low molecular weight characteristics enable it to form a helium-oxygen mixture when mixed with oxygen, which can reduce airway resistance, increase alveolar ventilation, and significantly improve the ventilation efficiency of patients with respiratory diseases such as asthma and chronic obstructive pulmonary disease (COPD). In addition, it is also used in scenarios such as helium-neon lasers, argon-helium cryotherapy and airtightness testing of medical equipment.

This report is a detailed and comprehensive analysis for global Medical Grade Helium market. Both quantitative and qualitative analyses are presented by manufacturers, by region & country, by Type and by Application.
