In this report, we will assess the current U.S. tariff framework alongside international policy adaptations, analyzing their effects on competitive market structures, regional economic dynamics, and supply chain resilience.

Medical grade oleogels are semi - solid systems composed of a liquid oil phase and a three - dimensional network structure formed by gelling agents. The gelling agents can be various substances such as waxes, fatty acids, or polymer - based materials. These oleogels are specifically designed and manufactured to meet the stringent requirements of the pharmaceutical industry.

They offer several advantages in pharmaceutical applications. Firstly, they can serve as a matrix for the controlled release of active pharmaceutical ingredients (APIs). The unique structure of oleogels allows for the encapsulation of APIs, enabling a sustained and regulated release over time, which can improve the efficacy and reduce the frequency of drug administration. Secondly, they have good biocompatibility, meaning they are less likely to cause adverse reactions when in contact with the human body. This property makes them suitable for a wide range of pharmaceutical formulations, including topical ointments, transdermal patches, and even some oral dosage forms.
