Medical-grade PMMA (Polymethyl Methacrylate) microspheres are specialized biocompatible particles made from highly purified PMMA materials, designed for use in medical and biomedical applications. These microspheres are widely used as injectable dermal fillers for cosmetic enhancements, such as wrinkle reduction and facial volume restoration, due to their stability, safety, and long-lasting effects. They are also employed in drug delivery systems, acting as carriers for controlled and sustained drug release. Additionally, their uniform size, excellent biocompatibility, and customizable surface properties make them ideal for applications in tissue engineering, diagnostics, and research on cell interaction and bioactive materials
