Abstracts

The global Medical Grade Power Converters market size is expected to reach \$ 1902 million by 2032, rising at a market growth of 6.6% CAGR during the forecast period (2026-2032).

Medical-grade power converters typically refer to AC/DC or DC/DC power modules and adapters used in medical electrical equipment. Their design, manufacturing, and testing must comply with the IEC 60601-1 series of safety standards and related electromagnetic compatibility requirements to ensure the electrical safety and functional reliability of patients and operators under normal and single-fault conditions. In terms of form, medical-grade power converters mainly include internal open or modular AC/DC power supplies, onboard DC/DC modules, desktop and wall-mounted adapters, etc. Their common characteristics are high insulation levels, extremely low leakage current, and reliability redundancy designed for medical scenarios.

In 2025, global Medical Grade Power Converter sales reached approximately 32,118 K Units, with an average global market price of around 35.2 US\$/Units. Production capacity reached 40,000 K Units, with a gross profit margin of approximately 40%.
