Medical coating materials are widely used in medical devices such as cardiovascular interventions, neurointerventions, microcatheters, guidewires, bone marrow infusions, needles, catheters, instruments and implants. These coatings make medical devices and devices resistant to corrosion and friction and keep them free from microorganisms and pathogens, working well on metals, polymers, glass and organic media. Coated inner and outer lumen, medical devices of different lengths and shapes. The polytetrafluoroethylene (PTFE) medical grade coatings segment is estimated to hold about one-third of the market share of medical coating materials. PTFE will continue to be one of the fastest growing segments in terms of market materials. PTFE-coated tools, devices or equipment are highly resistant to corrosion. They also have excellent heat and friction resistance, which is expected to strengthen the dominant position of PTFE materials in the medical wire-guide coating market.
