Medical high-frequency machine is the preferred equipment for plastic heat sealing. Medical high-frequency machine is a machine that uses high-frequency electric field to make the internal molecules of plastic oscillate to generate heat energy, thereby realizing the fusion of various products. Under the action of high-frequency electric field, dielectric materials (such as plastics) will undergo molecular polarization and arrange in the direction of the electric field. Since the high-frequency electric field changes direction at a very fast speed, the dielectric material will generate heat due to dielectric loss, thereby achieving the purpose of fusion.

Medical high-frequency machine is widely used in the manufacturing and processing of medical supplies, such as heat sealing and sealing of plastic products such as infusion bags, blood bags, and catheter bags. In addition, it can also be used for welding, welding, fusing, heat sealing, hot pressing, embossing and other processes of other plastic products.
