According to our (Global Info Research) latest study, the global Medical Hollow Fibre Haemodialyzer market size was valued at USD million in 2022 and is forecast to a readjusted size of USD million by 2029 with a CAGR of % during review period. The influence of COVID-19 and the Russia-Ukraine War were considered while estimating market sizes.

The hollow fibre dialyzer, also known as a hollow fibre dialyzer, is made up of a hollow fibrous semi-permeable membrane as its main part of action. When haemodialysis is carried out, the patient's blood and dialysis fluid are introduced into the dialyzer at the same time, with the two flowing in opposite directions on either side of the dialysis membrane. With the help of the solute gradient, osmotic gradient and water pressure gradient on either side of the membrane, toxins and excess water retained in the body are removed and the body is replenished with the required substances.
