According to our (Global Info Research) latest study, the global Medical Hydrophone market size was valued at US\$ 35.6 million in 2024 and is forecast to a readjusted size of USD 48.7 million by 2031 with a CAGR of 3.7% during review period.

A medical hydrophone is a sensor designed specifically to receive sound waves in medical environments and convert them into electrical signals. Medical hydrophones are usually based on piezoelectric materials, such as PVDF, which are sensitive to sound waves and can convert them into electrical signals. They have high sensitivity and fast response characteristics, and can perform well in high-frequency ultrasound measurements. In addition, medical hydrophones usually have a small sensitive diameter and very short rise time, which is suitable for precise measurements in ultrasound transducers or medical devices.
