Medical Imaging Probe refers to specialized medical imaging components used to capture biological signals and generate diagnostic images of human tissues and organs. These probes convert physical signals such as ultrasound waves or electromagnetic signals into digital imaging data through transducer elements, sensors, and signal processing components. They are widely used in ultrasound imaging, endoscopic imaging, cardiac imaging, and other clinical diagnostic applications. The product scope includes ultrasound probes, endoscopic imaging probes, and other diagnostic imaging probes, excluding complete medical imaging systems.

The industry chain of Medical Imaging Probe includes upstream materials and components, midstream probe manufacturing, and downstream medical applications. Upstream suppliers provide piezoelectric materials, semiconductor components, optical elements, cables, connectors, and precision structural parts. Midstream manufacturers
