Anaesthetics numb the body's sensations so that the patient does not feel pain during surgery or biopsies. They are also used in diagnostic or screening tests. The use of anaesthetics to subdue the patient is called anaesthesia in medicine. Anaesthetics are administered, most commonly through IV or inhalation. Some anaesthetics are administered in spray formats or skin patches as well. As the name suggests, inhalation anaesthetics are administered through the respiratory route with a face mask, tracheal tube, or laryngeal mask airway.
