The global Medical Instrument Offsite Reprocessing Service market size is expected to reach \$ 4956.1 million by 2030, rising at a market growth of 7.2% CAGR during the forecast period (2024-2030).

According to our research, the global market for medical devices is estimated at US\$ 603 billion in the year 2023, and will be growing at a CAGR of 5% during next six years. The global healthcare spending contributes to occupy 10% of the global GDP and is continuously rising in recent years due to the increasing health needs of the aging population, the growing prevalence of chronic and infectious diseases and the expansion of emerging markets. The medical devices market plays a significant role in the healthcare industry. The market is driven by several factors, including the increasing demand for advanced healthcare services globally, advancements in medical technology, growing geriatric population, rising healthcare expenditure, and increasing awareness about early disease diagnosis and treatment.

The Sterile Processing Department (SPD) is a highly critical department at a healthcare facility. The SPD is responsible for cleaning, decontaminating, sterilizing, and preparing surgical instruments for the Operating Room (OR). Many SPDs face daily challenges, from influxes in surgical case volumes and staffing shortages to processing more complex surgical instrument trays. Healthcare facilities are considering consolidating reprocessing within a health system or out to a third-party provider to standardize and streamline sterile processing processes. Offsite Reprocessing Centers (ORCs) are standalone facilities where healthcare facilities can send their soiled surgical instrument trays to be processed for cleaning and/or sterilization. Instruments are transported to an ORC via a temperature and humidity-controlled truck, where technicians will process

surgical instruments based on manufacturers' Instructions for Use (IFUs). Once instruments are fully processed, sterile processing technicians will prepare and pack them to be transported back to the healthcare facility, procedure ready.
