Abstracts

The global Medical Isolation Power Cabinet market size is expected to reach \$ 379 million by 2032, rising at a market growth of 2.8% CAGR during the forecast period (2026-2032).

In 2025, the global production of medical isolation power cabinets reached 609,700 units, with an average selling price of US\$500 per unit. The global annual production capacity of medical isolation power cabinets is approximately 900,000 units, with a gross profit margin of approximately 24.7%. Medical isolation power cabinets are power management devices specifically designed for medical institutions to provide a safe and stable power supply for medical equipment and electrical systems. They feature electrical isolation and protection functions, effectively reducing the potential risks of electric shock and electrical faults to patients and medical staff. The upstream of medical isolation power cabinets includes electrical components, leakage/insulation monitoring modules, cables, and terminals. The midstream consists of medical isolation power cabinet manufacturers, while downstream applications are mainly in operating rooms, intensive care units, and delivery rooms.

The medical isolation power supply cabinet market is currently showing steady growth, primarily driven by hospital IT upgrades and increased demands for electrical safety and patient safety in critical departments such as operating rooms and ICUs. Isolation power supply cabinets, with their features of suppressing grid leakage current and improving electrical isolation and power supply reliability, are seeing continued demand in new hospital construction, renovation and expansion projects, and existing equipment upgrades. However, the market also exhibits some distinct characteristics: First, product homogeneity is high, requiring companies to differentiate themselves in areas such as compliance certification capabilities, output stability/ripple and insulation monitoring

capabilities, noise and efficiency, and ease of operation and maintenance. Second, hospital bidding cycles and project budgets are affected by policies and project schedules, leading to periodic fluctuations. Third, while domestic brands are gradually showing advantages in cost and delivery, high-end/specialized scenarios require higher performance and system integration, necessitating continuous technological iteration.

This report studies the global Medical Isolation Power Cabinet production, demand, key manufacturers, and key regions.
