## Abstracts

The global Medical Laryngeal Mask market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

The medical laryngeal mask is a special artificial airway management technology, which was successfully developed in the mid-1980s and used clinically. The use of the laryngeal mask has made great progress, and the scope of application is becoming wider and wider. The ventilation mask at the front end of the laryngeal mask is oval, which can surround the epiglottis and glottis, forming a sealed ventilation space on the glottis. The patient can breathe spontaneously through the laryngeal mask, and controlled ventilation is also possible. After the laryngeal mask is placed, auscultation, airway resistance, PETCO<sub>2</sub> waveform, placement of gastric tube (double-tube laryngeal mask) and other methods can be used to judge whether its position is correct.

This report studies the global Medical Laryngeal Mask production, demand, key manufacturers, and key regions.
