Medical Laser Scanner refers to precision medical imaging and measurement devices that use laser technology to capture, analyze, and reconstruct three-dimensional information of biological tissues or anatomical structures. These scanners integrate laser sources, optical components, imaging sensors, and data processing systems to provide high-precision measurement and visualization capabilities. They are widely used in dentistry, ophthalmology, dermatology, surgery, rehabilitation, and medical research applications. The product scope includes dental laser scanners, medical 3D laser scanners, and surgical laser scanning systems, excluding industrial laser scanning equipment.

The industry chain of Medical Laser Scanner includes upstream optical components, midstream equipment manufacturing, and downstream medical applications. Upstream suppliers provide laser sources, optical lenses, sensors, semiconductor components,

precision mechanical parts, and electronic components. Midstream manufacturers conduct system design, optical integration, software development, image processing, calibration, and clinical performance testing. Downstream applications include hospitals, dental clinics, medical institutions, research centers, and healthcare providers requiring high-precision medical scanning solutions.
