According to our (Global Info Research) latest study, the global Medical Liquid Embolic Agents market size was valued at US\$ 157 million in 2025 and is forecast to a readjusted size of US\$ 258 million by 2032 with a CAGR of 7.4% during review period.

Medical liquid embolic agents are specialized substances used in interventional radiology to block blood flow in targeted blood vessels, typically for treating vascular abnormalities such as arteriovenous malformations (AVMs), aneurysms, or tumors. These agents are delivered via a catheter and solidify or precipitate upon contact with blood or tissue, creating a durable embolization effect. Common types include cyanoacrylate glues, ethylene-vinyl alcohol copolymer (EVOH), and onyx-based systems, which vary in composition, viscosity, and application methods. They offer a minimally invasive treatment option, reducing the need for open surgery while providing precise vascular occlusion to manage bleeding or cut off blood supply to abnormal tissues.
