## Abstracts

According to our (Global Info Research) latest study, the global Medical Low-value Consumables market size was valued at US\$ 124236 million in 2025 and is forecast to a readjusted size of US\$ 180579 million by 2032 with a CAGR of 5.5% during review period.

Medical Low-value Consumables refer to essential disposable or reusable medical devices that are approved by medical regulatory authorities, characterized by low unit price, high frequency of use, and relatively low technical threshold. Covering categories such as injection and puncture supplies (syringes, blood collection needles), wound care materials (gauze, dressings), protective products (disposable gloves, surgical gowns), and surgical auxiliary supplies (sutures, drainage tubes), these consumables are widely used in clinical diagnosis, treatment, and nursing processes. They play a fundamental role in ensuring medical safety, preventing cross-infection, and maintaining the smooth operation of medical services, with strict requirements for sterility, biocompatibility, and compliance with relevant quality management systems.

Driven by the global aging population, the increasing prevalence of chronic diseases, the expansion of primary medical and public health systems in emerging markets, and the rising awareness of hospital infection control, the demand for Medical Low-value Consumables maintains steady growth, with the Asia-Pacific region becoming a core growth market. Business opportunities lie in developing functional and high-value-added products such as antibacterial and biodegradable variants, optimizing production processes to enhance cost competitiveness amid policy-driven centralized procurement, expanding overseas markets through localized production to avoid trade barriers, and exploring the extended home care market by launching small-packaged and easy-to-

use products.
