According to our (Global Info Research) latest study, the global Medical Non-ionic Contrast Agent market size was valued at US\$ million in 2025 and is forecast to a readjusted size of US\$ million by 2032 with a CAGR of %during review period.

Due to the improvement of the chemical structure, non-ionic contrast agents have two main advantages over ionic contrast agents: most of the adverse reactions of contrast agents are related to high osmosis and charging. The distinguishing feature of non-ionic contrast agents is low osmotic pressure. It is uncharged, so it will not destabilize the internal environment; non-ionic contrast agents have less impact on peripheral blood vessels, pulmonary circulation vessels and cardiac conduction systems, so there are fewer sequelae, and they can be used for cardiovascular angiography.
