Medical nylon monofilament thread is a type of surgical suture made from single-strand polyamide (nylon) material. It features a smooth surface, uniform diameter, and is free of stains or knots. Due to its excellent physical properties and biocompatibility, it is particularly suitable for suturing and ligating soft tissues in medical surgeries. The medical nylon monofilament thread offers high strength and durability, providing stable support during surgery and reducing the risk of post-operative infection. With its good biocompatibility, this suture causes minimal immune reaction in the body and is widely used in surgeries, including general, plastic, and dental procedures.
