According to our (Global Info Research) latest study, the global Medical Open Ventilator Breathing Circuit market size was valued at USD million in 2022 and is forecast to a readjusted size of USD million by 2029 with a CAGR of % during review period.

Open ventilator breathing circuit has a proximal link, a distal link, an expiratory tube extending between the proximal and distal links, and between the proximal and distal links. A suction pipe extending in between. The expiratory tube is a corrugated expiratory tube that is extendable between a fully compressed rest position and a fully extended rest position and has intermediate rest positions. The expiratory tube can maintain its resting length at a number of intermediate rest positions without the application of external force. The suction duct is a corrugated suction duct having a length that is variable between a fully compressed rest position and a fully extended rest position, inclusive, between a fully extended rest position and a fully compressed rest position multiple intermediate rest positions. The suction tube can also maintain these intermediate rest positions without the application of external force.
