The global Medical Open Ventilator Breathing Circuit market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

According to our research, the global market for medical devices is estimated at US\$ 603 billion in the year 2023, and will be growing at a CAGR of 5% during next six years. The global healthcare spending contributes to occupy 10% of the global GDP and is continuously rising in recent years due to the increasing health needs of the aging population, the growing prevalence of chronic and infectious diseases and the expansion of emerging markets. The medical devices market plays a significant role in the healthcare industry. The market is driven by several factors, including the increasing demand for advanced healthcare services globally, advancements in medical technology, growing geriatric population, rising healthcare expenditure, and increasing awareness about early disease diagnosis and treatment.

Open ventilator breathing circuit has a proximal link, a distal link, an expiratory tube extending between the proximal and distal links, and between the proximal and distal links. A suction pipe extending in between. The expiratory tube is a corrugated expiratory tube that is extendable between a fully compressed rest position and a fully extended rest position and has intermediate rest positions. The expiratory tube can maintain its resting length at a number of intermediate rest positions without the application of external force. The suction duct is a corrugated suction duct having a length that is variable between a fully compressed rest position and a fully extended rest position, inclusive, between a fully extended rest position and a fully compressed rest position multiple intermediate rest positions. The suction tube can also maintain these intermediate rest positions without the application of external force.
