Abstracts

The global Medical Oxygen Carriers market size is expected to reach \$ 24.86 million by 2032, rising at a market growth of 18.2% CAGR during the forecast period (2026-2032).

Medical Oxygen Carriers are engineered medical products designed to transport and deliver oxygen in the bloodstream to support tissue oxygenation when red blood cell oxygen delivery is inadequate, unavailable, or needs temporary supplementation. They aim to mimic or augment the oxygen transport function of hemoglobin by using approaches such as modified hemoglobin systems, perfluorocarbon based oxygen carriers, or other particulate oxygen delivery platforms, and are studied for use in settings like severe anemia, blood loss, ischemia, and oxygen limited tissues where rapid, controllable oxygen delivery could improve outcomes.
