Medical oxygen molecular sieve adsorbent is an adsorption material used in medical oxygen production, usually made of molecular sieve materials such as zeolite. Its main function is to selectively adsorb nitrogen in the air through the principle of physical adsorption during the air separation process, thereby separating oxygen from the air and providing high-purity oxygen. The adsorbent has a microporous structure and can effectively adsorb and release gas through pressure changes. It is widely used in medical oxygen production and supply systems for patient oxygen treatment or to support respiratory function.
