According to our (Global Info Research) latest study, the global Medical Plasmin market size was valued at USD million in 2023 and is forecast to a readjusted size of USD million by 2030 with a CAGR of % during review period.

Plasmin refers to a proteolytic enzyme that can specifically degrade fibrin gel and is an important component in the fibrinolytic system. The coagulation and fibrinolysis systems in the body are interdependent and closely linked. Once the body generates a coagulation reaction, it also activates the fibrinolytic system almost simultaneously, removing excess thrombus in the body and reducing the level of fibrinogen in the body through a negative feedback effect, thus avoiding excessive aggregation of fibrin.
