In terms of application, the largest application is General Surgery, with a share over 45%, followed by Thoracic Surgery, Urology and Gynecology.

Rigid endoscopes are inserted into the human body through small surgical incisions and cannot be bent. They are suitable for more departments than soft endoscopes, mainly general surgery, thoracic surgery, urology, obstetrics and gynecology, and orthopedics. Rigid endoscopes are used in most surgical endoscopic applications, allowing the endoscopist to view organs, blood vessels, or pathologically altered surfaces without making large incisions in the body and providing a clearer view than the naked eye. . The main design criteria are viewing angle, depth of field, magnification, image brightness, image quality, distortion and image size, which must all be properly balanced.

This report studies the global Medical Rigid Endoscope production, demand, key manufacturers, and key regions.
