A medical air compressor is a specialized piece of equipment used in healthcare settings to generate a continuous supply of clean and compressed air for various medical applications. These medical air systems play a crucial role in ensuring the smooth functioning of medical equipment and procedures that rely on a stable and continuous source of compressed air. Medical air compressors are designed to meet strict safety and quality standards to ensure the air produced is free from contaminants, such as particles, moisture, and oil. The air is typically filtered and dried to prevent potential harm to patients or damage to medical instruments used in the hospitals. Medical air compressors used in the hospital environment require desiccant air dryers to be added to provide completely dry air.

The medical air compressors are usually oil-less reciprocating type compressors or oil-less scroll air compressors, which operate at high efficiency and low noise to suit the medical environment.
