Abstracts

The global Medical Serial EEPROM market size is expected to reach \$ 59.38 million by 2032, rising at a market growth of 4.1% CAGR during the forecast period (2026-2032).

Medical Serial EEPROMs are high-reliability non-volatile memory chips with standard serial bus (I2C/SPI) interfaces, specifically designed for medical electronic devices. Complying with FDA 21 CFR Part 820 and ISO 13485 medical regulations, they feature wide operating temperature range (-40° to 85°), high data integrity, long data retention (up to 20 years), radiation resistance and high ESD protection, meeting the long-term stable data storage and traceability requirements of portable diagnostic devices, vital signs monitors, blood glucose meters, ECG monitors and other medical equipment.

The price of medical serial EEPROMs varies by storage capacity, interface type, package form and purchase volume. The unit price of mainstream medical-grade (FDA/ISO-compliant) SOIC-8 packaged products ranges from 0.60 to 3.80 US dollars each. Small-capacity (1K~16Kbit) models are priced at 0.60 to 1.20 US dollars each, while medium and large-capacity (32K~1024Kbit) models cost 1.10 to 3.80 US dollars each. Bulk orders enjoy a discount of 10% to 20%. The industrial chain is well-developed. The upstream includes high-purity silicon wafers, special photoresists, medical-grade packaging materials and high-precision electronic chemicals. The midstream focuses on chip design, wafer fabrication, medical-grade reliability testing and packaging. Professional manufacturers at home and abroad (such as ST, Microchip, ADI, Giantec Semiconductor) occupy a major market share. The downstream serves medical device manufacturers, medical equipment system integrators and medical service institutions, widely used in home healthcare, clinical diagnosis and monitoring equipment, forming a complete industrial chain from raw material supply and chip production to end medical applications.
