## Abstracts

According to our (Global Info Research) latest study, the global Medical Skull CT market size was valued at US\$ million in 2024 and is forecast to a readjusted size of USD million by 2031 with a CAGR of %during review period.

Computed tomography (CT) imaging, also known as 'CAT scanning' (Computerized Axial Tomography), provides a different form of imaging known as cross-sectional imaging. This report mainly covers the medical skull CT.

CT scanning of the head is typically used to detect infarction, tumors, calcifications, haemorrhage and bone trauma. Of the above, hypodense (dark) structures can indicate edema and infarction, hyperdense (bright) structures indicate calcifications and haemorrhage and bone trauma can be seen as disjunction in bone windows. Tumors can be detected by the swelling and anatomical distortion they cause, or by surrounding edema. Ambulances equipped with small bore multi-sliced CT scanners respond to cases involving stroke or head trauma. CT scanning of the head is also used in CT-guided stereotactic surgery and radiosurgery for treatment of intracranial tumors, arteriovenous malformations and other surgically treatable conditions using a device known as the N-localizer.

In India, Medical Skull CT key players include Siemens Healthcare, GE Healthcare, Philips, Toshiba, etc. Global top four manufacturers hold a share nearly 90%.

North India is the largest market, with a share about 35%, followed by West India, and North East India, both have a share about 40 percent.

In terms of product, 16S Spiral Scan CT is the largest segment, with a share over 5%. And in terms of application, the largest application is Private Hospital, followed by Public Hospital.
