Abstracts

A medical smart infusion pump is a sophisticated medical device used to administer fluids, such as medications, nutrients, or blood, into a patient's bloodstream in a controlled manner. These pumps feature advanced technology and integrated software that allow for precise and programmable delivery of fluids at specified rates and volumes. Smart infusion pumps can be programmed with drug libraries containing dosing limits, alerts for medication errors, and other safety features to help prevent medication administration errors. Additionally, they may have connectivity capabilities for integration with electronic medical records (EMRs) and other hospital systems, enabling automated documentation and enhanced medication management. Smart infusion pumps play a crucial role in ensuring accurate and safe delivery of intravenous therapies, improving patient outcomes while reducing the risk of adverse events.
