## Abstracts

The global Medical Surgical Robot Servo Motors market size is expected to reach \$ 7050.4 million by 2029, rising at a market growth of 5.1% CAGR during the forecast period (2023-2029).

Medical surgical robot servo motors are mainly arranged in the kinematic joints of robots. In surgical robots, DC motors are mainly used, which has the advantage of higher power; the encoder is installed on the output shaft of the motor and rotates synchronously with the motor, and transmits the signal to the driver while rotating. ; The driver judges whether the steering, speed, and position of the servo motor are correct according to the signal, and then performs correction and adjustment, and sends out a corresponding control current according to the command.

This report studies the global Medical Surgical Robot Servo Motors production, demand, key manufacturers, and key regions.
