The global Medical Thermopile Sensor market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

A medical thermopile sensor is a type of sensor used in medical and healthcare settings to measure temperature. It utilizes the thermoelectric effect, which is the conversion of temperature differences into electrical voltage. A thermopile sensor consists of multiple thermocouples connected in series or parallel. Each thermocouple is comprised of two dissimilar materials that generate a voltage across their junctions when exposed to a temperature gradient. The total voltage output of the thermopile is then proportional to the temperature difference between the hot and cold junctions.

This report studies the global Medical Thermopile Sensor production, demand, key manufacturers, and key regions.
