Abstracts

The global Medical Tissue Forceps market size is expected to reach $ 391 million by 2032, rising at a market growth of 5.5% CAGR during the forecast period (2026-2032).

In 2025, global sales of medical tissue forceps reached 14.5 million units, with an average selling price of US$18 per unit. Medical tissue forceps are precision surgical instruments used in surgery to clamp, grasp, fix, or stop bleeding in tissues and blood vessels. They are typically made of stainless steel or highly corrosion-resistant alloys, with polished or plated surfaces to ensure durability and ease of cleaning and sterilization. The product structure includes forceps arms, handles, locking mechanisms, and working end jaws, featuring flexible operation, stable grip, precise force transmission, and easy repeated sterilization. They are widely used in general surgery, orthopedics, cardiothoracic surgery, and minimally invasive surgery. The industry's total production capacity is approximately 21 million units per year, with an average gross profit margin of approximately 28%.

Upstream raw materials mainly include stainless steel sheets, alloy components, and metal parts for locking mechanisms. Downstream demand primarily comes from hospitals and surgical centers, medical device distributors, and research and teaching institutions. With the improvement of global medical service capabilities, the increase in the number of surgeries, and the popularization of minimally invasive surgery, the demand for medical tissue forceps continues to grow. At the same time, the products are developing towards high precision, lightweight, reusable sterilization, and compatibility with intelligent surgical platforms, and have a stable market space and business opportunities in the fields of surgical instrument standardization and surgical safety assurance.

As an indispensable basic instrument in surgical procedures, the market demand for medical forceps is highly dependent on the global number of surgeries, the expansion of medical institutions, and the diversification of surgical types. With the increasing prevalence of minimally invasive surgery, robot-assisted surgery, and high-precision surgical procedures, the demand for high-precision, lightweight, corrosion-resistant, and easily sterilizable forceps continues to rise. Simultaneously, the improvement of global healthcare capabilities, the construction of hospitals in emerging markets, and the expansion of surgical centers provide stable market support for medical forceps.

From an industry trend perspective, traditional stainless steel forceps still hold the majority of the market share, but the demand for customized, modular instruments compatible with intelligent surgical platforms in high-end surgical scenarios is driving product upgrades towards lightweight, precision, and traceability. Furthermore, product reusability and high-temperature, high-pressure sterilization resistance have become key competitive factors, directly impacting procurement and long-term operating costs. In terms of regional markets, the accelerated construction of medical infrastructure in emerging economies and the continuous upgrading of surgical instruments by high-end medical institutions in developed countries also provide dual impetus for market growth. Overall, the medical forceps market will maintain steady growth, exhibiting higher added value and long-term business opportunities in the fields of minimally invasive and high-precision surgery.

This report studies the global Medical Tissue Forceps production, demand, key manufacturers, and key regions.

This report is a detailed and comprehensive analysis of the world market for Medical Tissue Forceps and provides market size (US$ million) and Year-over-Year (YoY) Growth, considering 2025 as the base year. This report explores demand trends and competition, as well as details the characteristics of Medical Tissue Forceps that contribute to its increasing demand across many markets.

Highlights and key features of the study

Global Medical Tissue Forceps total production and demand, 2021-2032, (K Units)

Global Medical Tissue Forceps total production value, 2021-2032, (USD Million)

Global Medical Tissue Forceps production by Application, production, value, CAGR, 2021-2032, (USD Million) & (K Units)

This report profiles key players in the global Medical Tissue Forceps market based on the following parameters - company overview, production, value, price, gross margin, product portfolio, geographical presence, and key developments. Key companies covered as a part of this study include Innovia Medical, Salwan Surgicare, Stryker, Surgical Holdings, Narang Medical, Eunicare, JINHUAN, GPC Medical, Dispomed, CHIRMED, etc.

This report also provides key insights about market drivers, restraints, opportunities, new product launches or approvals.

Stakeholders would have ease in decision-making through various strategy matrices used in analyzing the World Medical Tissue Forceps market

Detailed Segmentation:

Each section contains quantitative market data including market by value (US$ Millions), volume (production, consumption) & (K Units) and average price (US$/Unit) by manufacturer, by Type, and by Application. Data is given for the years 2021-2032 by year with 2025 as the base year, 2026 as the estimate year, and 2027-2032 as the forecast year.
