## Abstracts

The global Medical Toxicology Service market size is expected to reach \$ 237 million by 2032, rising at a market growth of 5.1% CAGR during the forecast period (2026-2032). Medical Toxicology Service refers to a professional scientific assessment conducted in the laboratory to systematically study the potential harmful effects of candidate drugs on organisms before they enter human trials. Its core objective is to identify the drug's toxic target organs, dose dependence, reversibility, and safety window to predict human risks. The service covers everything from in vitro screening to long-term repeated-dose in vivo studies, strictly adhering to GLP (Good Laboratory Practice) guidelines. This service directly addresses the most critical safety data gaps in new drug development, providing a scientific basis for dose selection in first-in-human trials. It is a necessary prerequisite for regulatory approval of clinical trials, aiming to maximize the safety of research subjects and reduce the risk of mid-to-late-stage drug development failure. The global medical toxicology services market exhibits a 'three-way balance, with emerging players catching up' pattern. North America (centered on the United States), with industry giants like Charles River and Labcorp, the highest concentration of innovative pharmaceutical companies, and the most stringent FDA regulations, holds the largest market share and technological dominance. The European market is steadily developing due to its strong scientific foundation and mature regulatory system (EMA), particularly specializing in the toxicological evaluation of complex biologics and novel therapies. The Asia-Pacific region, represented by China, is the fastest-growing market. Marked by the rapid rise of CROs such as WuXi AppTec, it is transforming from a 'follower' to a 'co-runner' through cost advantages and continuously improving GLP compliance and technological innovation capabilities, serving both global and local innovation.
