A Medical tracheostomy tube holder is a medical securement device designed to stabilize and retain a tracheostomy tube or tracheostomy cannula around the patient's neck. It is typically made from foam, cotton, nonwoven fabric, polyester, nylon, polyurethane foam, moisture-wicking layers, skin-friendly backing materials, and hook-and-loop fastening tabs. The device attaches to the neck flange of the tracheostomy tube and helps maintain secure positioning during coughing, patient turning, transport, ventilation, suctioning, and routine tracheostomy care. Its key function is to reduce unnecessary tube movement, accidental decannulation, local skin irritation, pressure-related discomfort, and the operational burden associated with traditional twill ties or adhesive tapes. Common product formats include one-piece holders, two-piece adjustable neckbands. Major care settings include intensive care units, respiratory therapy departments, ENT wards, acute tracheostomy procedures, long-term care facilities, homecare, and chronic airway management.
