The global Medical Tungsten Alloy Collimator market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

Medical tungsten alloy collimators refer to tungsten alloy front collimators and tungsten alloy rear collimators used in medical CT machines. These collimators made of high-density alloys have high density, smooth surface, and good dimensional accuracy. etc. The tungsten alloy front collimator is located in the X-ray tube window, that is, the X-ray tube side collimator, which is used to shield unnecessary rays and generate fan-shaped X-ray beams. The tungsten alloy rear collimator is the collimator on the detector side, which can make the detector only receive the rays that are vertically incident on the detector, and minimize the interference of scattered rays from other directions.
