## Abstracts

According to our (Global Info Research) latest study, the global Medical Vein Visualization Devices market size was valued at USD 150.2 million in 2023 and is forecast to a readjusted size of USD 321.5 million by 2030 with a CAGR of 11.5% during review period.

Vein Visualization device or Vein finder is a biomedical device which uses near infrared light to illuminate subcutaneous veins on skin surface. These devices are beneficial in case where health problems create difficulties in correct vein identification particularly in neonates with their extremely small and fragile veins and arteries, elderly patients, overweight patients and for rapid access in emergency situations.

A vein finder is easy to use and has become an essential tool for any health care professional that performs venipuncture procedures – either for blood withdrawal or intravenous injections.

Vein finders are critical across multiple medical professional procedures, be it quick and accurate IV access requirement by a frontline healthcare professional, a routine blood specimen collection by a phlebotomist or a medical professional in the hospital – a good quality vein finder is an absolute requirement for all.
