Medical Wearable ECG Patch is a compact wearable medical monitoring device that continuously records electrocardiogram (ECG) signals through skin-contact electrodes and integrated electronic components. The device typically integrates ECG electrodes, flexible circuits, sensors, signal processing chips, batteries, and wireless communication modules to enable long-term cardiac monitoring outside traditional clinical environments. It is mainly used for arrhythmia detection, remote patient monitoring, cardiac rehabilitation, chronic disease management, and preventive healthcare. The product boundary includes disposable ECG patches and wearable ECG monitoring patches, excluding traditional Holter monitors, implantable cardiac devices, and general fitness wearable products.

The medical wearable ECG patch industry chain includes upstream suppliers of conductive materials, flexible substrates, electrodes, sensors, semiconductor chips, batteries, and medical adhesives; the midstream sector covers hardware design,
