Abstracts

According to our (Global Info Research) latest study, the global Medical White Release Film market size was valued at US\$ 3006 million in 2025 and is forecast to a readjusted size of US\$ 5605 million by 2032 with a CAGR of 9.3% during review period.

Medical White Release Film is a type of protective film used in medical applications, primarily as a release liner for adhesive products such as medical tapes, wound dressings, and sterile packaging. It is designed to be non-reactive, sterile, and resistant to tearing, ensuring that adhesives can be safely applied and removed without contamination. The film often has a smooth surface that allows easy peeling and precise application in medical settings. In 2025, global medical release film production reached approximately 1.04 billion m², with an average global market price of around US\$ 2.80 per m². Annual production capacity is 1.15 billion m². Gross Profit Margin: ~25%. The medical white release film industry chain is divided into upstream, midstream, and downstream segments. Upstream includes raw materials such as PET, PP, PE films, and silicone coatings. Midstream consists of specialized manufacturers who produce coated films, release liners, and sterilized products. Downstream covers medical adhesive tape producers, wound care manufacturers, transdermal patch suppliers, and medical device packaging companies. The industry is highly dependent on the quality and consistency of upstream materials, as they directly affect the performance of medical adhesives and sterility standards. Medical white release film is a critical yet often overlooked component in healthcare products. Its performance ensures the safety, effectiveness, and usability of medical adhesives and wound care products. With growing demand for minimally invasive treatments, disposable medical devices, and transdermal patches, I believe this segment will continue to grow steadily. Investing in high-quality production and innovation, especially in eco-friendly and high-precision

coatings, can create strong competitive advantages.
