Abstracts

The global Medium Borosilicate Vials market size is expected to reach \$ 2919 million by 2032, rising at a market growth of 5.5% CAGR during the forecast period (2026-2032).

Medium borosilicate vials making is a pharmaceutical packaging container made from medium borosilicate medicinal glass tubes as raw materials, through processes such as tube cutting, flame forming, bottle mouth processing, bottle bottom forming, annealing, online detection, cleaning, and clean packaging. It is mainly used for injection packaging of water injections, freeze-dried powder injections, biologics, vaccines, antibody drugs, oncology drugs, anesthetics, and high-end generic drugs. Its characteristics are good water resistance, strong chemical stability, low precipitation on the inner surface, good thermal shock resistance, high dimensional accuracy, and uniform wall thickness. In 2025, global Medium Borosilicate Vials production reached approximately 25,987 M Units, with an average global market price of around US\$ 75 per k unit.

The market for medium borosilicate vials is currently in a stage of increasing penetration rate of high-end pharmaceutical glass packaging. The core opportunities come from the improvement of drug safety standards, the growth of biologics and vaccines, the expansion of freeze-dried preparations, and the increasing demand from pharmaceutical companies for low precipitation, low particle, high compatibility, and stable supply chains. International companies have obvious advantages in borosilicate glass tubes, high-end bottle shapes, surface treatment, and multinational pharmaceutical certification, while Chinese companies rely on domestic substitution, capacity expansion, local pharmaceutical customer resources, and cost control to accelerate market share growth. In the future, the focus of competition will be on glass tube quality, automated full inspection, clean packaging, pre sterilized ready to use supply, and long-term customer certification. Enterprises with stable raw material

supply, quality system, and large pharmaceutical customer base are more likely to obtain high value-added orders.
