## Abstracts

The global Medium Long Focus Laser Projection Equipment market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

Laser projection equipment, also known as laser projectors, uses laser beams to transmit images. The optical components of the laser projection equipment are mainly composed of red, green and blue light valve, beam combining X prism, projection lens and driving light valve. There are red, green and blue lasers in the laser projection equipment. After the laser beam is expanded by the corresponding optical elements and processing chips in the machine, it is transmitted to the X prism to integrate the three laser beams, and then the integrated laser is transmitted to the projection screen by the projection objective lens to complete the entire laser projection display process.
