The global Medium Molecular Weight Polyisobutylene market size is expected to reach \$ 175.7 million by 2029, rising at a market growth of 3.6% CAGR during the forecast period (2023-2029).

The global medium molecular weight polyisobutylene key manufacturers are BASF, Shandong Hongrui and Zhejiang Shunda, etc. The top three manufacturers together occupy more than 90% of the market share, of which the largest manufacturer is BASF, accounting for 56%. The global origins are mainly distributed in Europe, China and Japan. The Asia Pacific region has the largest consumer market with a 40% market share. In terms of product category, it is divided into industrial grade and food grade, with the former holding a larger market share of about 80%. In terms of applications, adhesives are the top application area with a share of 37%; in addition, sealants and chewing gum are also important applications.

Medium molecular weight polyisobutylene's average molecular weight ranges between 40,000 and 120,000 g/mol. Medium molecular weight polyisobutylene is employed as viscosity modifier, tack improver in adhesive formulations, and primary binder in caulking and sealing compounds. It is also used in fuel and lubricating oil additives. It is extensively used as a protective barrier in the adhesive industry. For instance, it is used where exposure to sunlight is a potential risk for sealants. Medium molecular weight polyisobutylene is employed in insulating glass sealants and roofing membranes in the construction industry. Furthermore, it is used in protective films or acoustic barriers in the automotive industry. Medium molecular weight polyisobutylene is also an essential ingredient in the production of chewing gums.
