According to our (Global Info Research) latest study, the global Medium and Large Capacity Electric Double Layer Capacitor market size was valued at USD 887 million in 2022 and is forecast to a readjusted size of USD 2113.5 million by 2029 with a CAGR of 13.2% during review period. The influence of COVID-19 and the Russia-Ukraine War were considered while estimating market sizes.

A supercapacitor, also known as an electric double-layer capacitor, is a special type of capacitor that exhibits properties between conventional capacitors and rechargeable batteries. Unlike batteries that store charge through chemical reactions, supercapacitors store charge by adsorbing ions on the surface of activated carbon electrodes immersed in an electrolyte, forming an electric double layer. As a result, while batteries require hours to charge, supercapacitors can be charged in a matter of seconds. Furthermore, unlike batteries that have limited charging cycles, supercapacitors are theoretically unlimited in their cycle life.
