Abstracts

The global Medium and Large Commercial Launch Vehicles market size is expected to reach \$ 24263 million by 2032, rising at a market growth of 9.1% CAGR during the forecast period (2026-2032).

In 2025, global Medium and Large Commercial Launch Vehicles production reached approximately 160 units , with an average global market price of around US\$80million per unit.

Medium and Large Commercial Launch Vehicles are commercially developed rockets designed to deliver medium to heavy payloads?typically ranging from several tons to tens of tons?into orbits such as low Earth orbit (LEO), geostationary transfer orbit (GTO), or beyond. Compared with small launch vehicles, they feature more advanced propulsion systems, structural design, and mission capabilities, enabling deployment of communication satellites, Earth observation satellites, large constellations, and deep-space missions. With the growth of the commercial space industry, medium and large launch vehicles have become the backbone of the launch market, offering advantages in payload capacity, cost efficiency (especially with reusability), and launch cadence.

The upstream of medium and large commercial launch vehicles includes rocket engines (liquid and solid), propellants (LOX, LH2, kerosene, methane), high-performance structural materials (aluminum, titanium alloys, composites), avionics systems, and precision components. The midstream consists of rocket manufacturers and launch service providers such as SpaceX, Blue Origin, United Launch Alliance, and Arianespace, responsible for development, production, and launch operations. Downstream includes satellite manufacturers and operators such as Boeing, Airbus

Defence and Space, and OneWeb, serving communication, Earth observation, navigation, and deep-space exploration.

This report studies the global Medium and Large Commercial Launch Vehicles production, demand, key manufacturers, and key regions.
